

Key dispatch pattern

```
switch (view->type) {  
    case CTRL_NODE_REGISTER:  
        handle_node_register(runtime, view);  
        break;  
  
    case CTRL_TIME_SYNC:  
        handle_time_sync(runtime, view);  
        break;  
  
    case DATA_JOB:  
        session_manager_deliver_data(...);  
  
}
```

One decode point, explicit typed dispatch and bounded handlers.
