

Multi-host collaboration

ESP32-P4

leader | Ethernet | local mcu1/mcu2

advertise / election / time.exchange

topology.sync / read_node / write_node

ESP32-S3

peer | WiFi | local mcu3

mcu1

global owner=P4

mcu2

global owner=P4

mcu3

global owner=S3

Consistent global namespace

/mcu1 /mcu2 /mcu3

The owner host executes the physical UART request; other hosts proxy it over bounded CBOR.
